

## How to reset android phone with power button

[Continue](#)

You might not have noticed many changes to Android 11 when you updated your Pixel phone last week—unless you tried to take a screenshot on your Pixel 2 or Pixel 3. Depending on which navigation method you selected, you might have lost the handy screenshot shortcut that was built into the power button. While Google has taken away two-button navigation on the Pixel 4 and 4a, it remains on the Pixel 2 and 3, which is where the problems begin. If you were using 2-button navigation on Android 10—with the pill-shaped home button and back arrow—it'll remain on Android 11. However, like the other Pixel phones, when you long-press the power button, you'll get a whole new set of options. At the top are three buttons for Emergency, Lockdown, and Power, followed by Google Pay and Home actions. IDG The 2-button navigation menu on the Pixel 2 and 3 loses the Screenshot button from the power menu and the Recents menu. What's missing is the Screenshot button, which was previously at the bottom of the power menu in Android 10. In Android 11, Google has moved it to the Recents multitasking screen, where you'll find it underneath the corresponding screen. That way you can take a quick screenshot without filling your screen with the app's screen. Oddly, however, that option only appears if you're using Gestures or 3-button navigation. If you're using 2-button navigation on the Pixel 2 or 3, the Screenshot option won't appear in the Recents menu, so you'll need to switch to one of the other two navigation options to get it back. Of course, you're freely able to hold the power and volume-down buttons to take a screenshot on any Pixel phone, but sadly if you want the button back, you'll need to abandon 2-button navigation for good. Sometimes, you and your Android phone just don't get along: You want to watch a video and it won't stop pinging you with notifications. You have hundreds of apps installed on your phone and trying to figure out which one is incessantly bothering you would take too much time. In these situations, the scorched-Earth method works best—provided you don't mind losing all your personal data. To reset your Android phone back to its pristine, fresh-from-the-factory state, simply head on over to your phone's Settings app and look for the Backup and Restore menu. Tap on it, and you should see an option labeled Factory data reset. Selecting this option will pop up a window asking you to confirm your selection. At this point, note that if you choose to proceed, you'll lose all data on your phone, including your apps, photos, music, and any contacts that aren't backed up to Gmail's servers. If you're okay with starting over, hit the reset phone button and your phone will begin the process of resetting itself. Resetting your phone can take anywhere between 5 and 10 minutes, depending on how much stuff you had on it. Some phones won't let you reset them unless you have over a certain percentage of battery, so it's best to perform this operation while the phone is plugged in and charging. Once the phone is done purging itself of all your data and apps, you're phone will be just like new—software-wise, anyway—and you'll be prompted to go through the setup process once more. Regardless of what phone you're using—whether it's one of the best Android phones you can buy today or an older phone—there are several reasons why you might need to factory reset your phone. Maybe your phone is overloaded with apps and running slow, you've downloaded a recent update and it's causing problems, or you just want to reset your phone before selling it. Here's how to reset your Android phone through the phone settings or via the recovery mode. Before we get started, know that a factory reset will erase all the data on your phone. If you haven't backed up your contacts, pictures, videos, documents, and anything else (preferably in the cloud), you should do so now. Not sure where to back up your data before a factory reset? Read our guide on how to do that first. Given the variety of phones available on Android, I'll be using the Pixel 6a and Samsung's Galaxy A51 as examples for this guide. The Pixel is a good baseline as the process is nearly identical on Android One devices from Nokia, Xiaomi, Motorola, and other companies like OnePlus that retain a "stock" user interface. As for the Galaxy A51, the phone is running Samsung's One UI, and with the company being the largest manufacturer in the world of Android by some considerable margin, it makes sense to see how things differ. With that out of the way, let's get started. The easiest way to factory reset your phone is through the settings menu. The location of the factory reset option might vary slightly based on the phone you're using, but once you've found the Backup and reset menu, you should be in the clear. Tap the Settings icon from your home screen or app drawer. Swipe up to scroll down to the bottom of the settings menu. Tap System. (Image credit: Source: Harish Jonnalagadda / Android Central) Hit Reset options. Select Erase all data (factory reset). Swipe up to scroll down to the bottom of the page. (Image credit: Source: Harish Jonnalagadda / Android Central) Hit the Reset phone button. Enter your device PIN and select Continue. Select Erase everything. (Image credit: Source: Harish Jonnalagadda / Android Central) Your device will reboot and you can go through the initial setup as if it were a new phone. How to factory reset your Samsung phone Tap the Settings icon from your home screen or app drawer. Swipe up to scroll down to the bottom of the page. Tap the General management tab. (Image credit: Source: Harish Jonnalagadda / Android Central) Hit Reset. Hit Factory data reset. Scroll down to the bottom of the page. (Image credit: Source: Harish Jonnalagadda / Android Central) Hit the blue Reset button. Enter your device PIN and tap Next. Tap Delete all. (Image credit: Source: Harish Jonnalagadda / Android Central) Your phone will reboot and you'll have to go through the setup process again before you're able to restore your data. How to factory reset your phone via recovery mode (Image credit: Future) If your phone is running into issues with an update or if there's a malfunction that's preventing the device from booting up, you'll be able to factory reset by heading into recovery mode. At a high level, you'll be able to enter recovery mode by pressing down on the volume up and power buttons simultaneously. The process varies slightly based on the device you're using, as we'll see later on. Before we proceed to reset via recovery, you'll need to know about a security mode called Factory Reset Protection. Google rolled out Factory Reset Protection (FRP) a few years ago, and the feature is now standard on all phones running Lollipop and above. Essentially, FRP ensures that someone can't just factory reset your lost or stolen phone and set it up as new by booting into recovery mode. The mode requires you to sign into a Google account associated with the device after a factory reset. If you fail, you won't be able to proceed with the setup. Factory Reset Protection is a standard on all Android phones now. Based on what I've encountered, FRP kicks in when you reset a device via the recovery mode and isn't an issue when you're resetting via the settings. If you're interested in knowing more about the feature and how it works, you should take a look at this excellent article on the subject. So if you're looking to sell your device and are considering a factory reset, a better option would be to go through the aforementioned settings page. If you're unable to boot into your device and need a way of resetting data, then you can turn to recovery mode. Now that you understand the risks, here's how to reset your phone via recovery mode. How to factory reset via recovery mode on a Pixel/Android One phone If your phone is on, power it off. Hold down the Power and Volume down buttons. Instead of booting up normally, you'll see "Start" in an arrow pointed at the power button. Here you use the Volume buttons to scroll and the Power button to select an option. Press the Volume down button until you've highlighted Recovery mode. Press the Power Button to start recovery mode. When your phone reloads, you should see a screen that says "No command" with an Android robot in distress. Press and hold the power and volume up buttons together to load the recovery mode. Using the Volume buttons to scroll through the menu, highlight Wipe data/factory reset. Press the Power button to select. Highlight Yes to confirm the reset. Once the reset is complete, you will be bounced back to the same recovery mode menu. Press the Power button to select Reboot system now. Your phone will power on and be reset to its factory settings. Your phone will reboot and you'll have to go through the setup process again before you're able to restore your data. How to factory reset via recovery mode on a Samsung phone If your phone is on, power it off. Hold down the Power and Volume up buttons simultaneously. You should see the Samsung logo followed by an "Installing system update" screen. After a few seconds, you should see a "No command" message flashing on the screen. Wait 10 to 15 seconds at this screen and the device will enter recovery mode. Use the Volume buttons to scroll through the menu and the power button to make a selection. Highlight Wipe data/factory reset. Press the Power button to select. Highlight and select Yes to confirm the reset. Once the reset is complete, you will be bounced back to the same recovery mode menu. Press the Power button to select Reboot system now. Your phone will power on and be reset to its factory settings. The next time you turn the phone on, you will go through the initial setup process as if it were a brand new phone. Once set up, you can go about restoring your data from wherever you had it backed up. As mentioned earlier, if you're resetting your phone via recovery mode, Factory Reset Protection kicks in if you haven't already removed your Google accounts from the device. So if you're selling your device, make sure you remove your Google accounts and lock screen security before you do a hard reset through the recovery mode.
